Additives for Food Grade Lubricants

FUNCTIONAL PRODUCTS INC. offers an extensive line of additives for various types of food grade lubricants. This catalog presents information about our coupling agents for white oils, anti-wear and corrosion inhibitors for mineral oil based lubricants, and tackifiers and thickeners for white oil and vegetable oil based lubricants.

FUNCTIONAL PRODUCTS INC. offers a wide range of additives to fit your needs. Custom products are our specialty. We will be happy to create an additive that meets your needs.

Mission Statement:
Functional Products Inc. is committed to providing our customers with quality products and services that meet or exceed their expectations through the use of continuous improvement.

Health and Safety:
The product descriptions here, in Technical Data Sheets (TDSs) and on product labels are not intended to take the place of a Safety Data Sheet (SDS).

An SDS is provided with each order or sample shipment and can be downloaded from our website:
www.functionalproducts.com
Phone: 1-330-963-3060
Functional Products Inc.

Coupling Agents

White mineral oil, widely used in food grade lubricants, is generally a poor solvent for polar lubricant additives such as antioxidants and anti-wear additives. These coupling agents are additives used to increase the polarity of the food grade lubricant to allow use of other additives. They are also used to impart rubber-swelling properties to minimize seal shrinkage and leakage. Considering the wide variety of possible applications for coupling agents, it is recommended that samples of each product be evaluated by the formulator to determine appropriate use.

The active ingredients in each of these coupling agents are unique blends of esters in food grade diluent oil suitable for use as lubricant components where incidental food contact may occur. Our coupling agents have been registered with the NSF and may be cited as a component when submitting a lubricant composition to NSF.

The treatment level is typically two parts coupling agent to one part additive to be dissolved. Rubber swell is imparted at levels over 4%. Exact levels need to be determined by the formulator.

These coupling agents are easily handled and any convenient technique may be used for blending. Safe handling precautions are the same as those to be taken with the base oil. Please see the current Safety Data Sheet for detailed information.
FUNCTIONAL CI-426 and CI-426-EP are oil-soluble anti-wear additives and corrosion inhibitors that may be used in lubricants and hydraulic fluids with incidental food contact. FUNCTIONAL CI-426-EP is an extreme pressure version. Both are soluble in white oils, polyalphaolefins and other suitable base oils.

FUNCTIONAL CI-426 is composed of amine salts of an alkyl phosphate. FUNCTIONAL CI-426-EP is composed of phosphate compounds. Both additives meet the NSF certification requirements for HX-1 and HX-2 categories.

FUNCTIONAL CI-426 is permitted in food grade lubricants up to 0.5%, while FUNCTIONAL CI-426-EP can be used up to 2.0%. If only rust protection is needed, then 0.3-0.5% is usually sufficient. They may be used with antioxidants, viscosity modifiers or other additives customarily used in these applications.

In concentrated form, these additives may cause skin and eye irritation and should be handled with suitable personal protection. The concentrated form should not be heated unnecessarily, as heating could release fumes that may cause respiratory irritation. See the current Safety Data Sheet. The oils made with these additives are non-hazardous and may be handled with the usual precautions for similar oils.
**Water-soluble Corrosion Inhibitor**

**FUNCTIONAL CI-498** is a water-soluble corrosion inhibitor for use in lubricants and hydraulic fluids that may have incidental food contact.

**FUNCTIONAL CI-498** is an aqueous solution of a phosphate salt, NSF registered HX-1 and HX-2.

**FUNCTIONAL CI-498** is permitted in food-grade lubricants up to the level needed to function as a corrosion inhibitor. The treatment level will depend on the formulation, but may be in the range of 0.3-0.5%. It is generally used with antioxidants, thickeners or other additives customarily used in these applications.

</tbody>
</table>

In its concentrated form, **FUNCTIONAL CI-498** may cause skin and eye irritation and should be handled with suitable personal protection. **FUNCTIONAL CI-498** should be protected from freezing. See the Safety Data Sheet.

**Ceramax**

**Extreme Pressure Additive**

**FUNCTIONAL CERAMAX** and **CERAMAX PASTE** use size-optimized particles to provide efficient and economical products for use in heavy industrial and food processing grease. Both provide lubrication and metal-to-metal protection under extreme loads and temperatures, making them ideal replacements for graphite, MoS2 or PTFE.

Effective performance with either powder or paste can be provided with a treat rate as low as 5%. The end-user should determine the appropriate treat rate for their application.

**FUNCTIONAL CERAMAX** (NSF registration #143817, category HX-1, HX-2) is a white powder that allows maximum flexibility when formulating your grease.

**FUNCTIONAL CERAMAX PASTE** (NSF registration #147508, category HX-1, HX-2) is a pre-dispersed mixture for ease of processing and handling.
Tackifiers

Tackifiers are additives that confer tack or stringiness to a substance and are typically used to provide adherence in fluid lubricants and stringiness in greases. Tackifiers will also provide drip resistance and inhibit stray mist in pneumatic system lubricants. Our food grade tackifiers are NSF approved (category HX-1 and HX-2). Their specific compositions are identified in the table, below.

**FUNCTIONAL V-422** is a colorless general-purpose tackifier that is used in food grade greases and fluid lubricants.

**FUNCTIONAL V-498** is colorless, which makes it especially useful in spindle lubricants. It may also be used to provide adherence in way oils and chain lubricants, stringiness in greases and aerosol resistance in mist and pneumatic system lubricants.

**FUNCTIONAL V-584** confers tack or stringiness to lubricants made from vegetable- or animal-based fatty oils. It is principally used to provide adherence in chain oils in environmentally sensitive or food processing locations. **FUNCTIONAL V-584** is LuSC listed for EU Ecolabel formulations and suitable for use in Vessel General Permit (VGP) applications.

Due to the high viscosity of tackifiers, elevated temperature (approximately 150°F / 65°C) can facilitate handling. Temperatures over 200°F (95°C) may lead to degradation of tackiness and viscosity. Safe handling precautions are the same as those to be taken with the base oil; see the current Safety Data Sheet for more information. As the performance of products made from any tackifier may be lessened by shear, mechanical shearing during blending and handling should be minimized. **FUNCTIONAL V-498** is especially sensitive to shear.

Warming **FUNCTIONAL V-584** to approximately 120°F (50°C) may facilitate pumping and handling, however extended storage of this product at elevated temperatures is not recommended. To ensure product integrity, do not warm above 150°F (65°C). Safe handling precautions are the same as those to be taken with vegetable oils; see the current Safety Data Sheet for more detailed information.
**Viscosity Modifiers**

Viscosity modifiers give additional body to greases and fluid lubricants, provide drip resistance and inhibit stray mist in pneumatic system lubricants.

**FUNCTIONAL V-425** is a dual function viscosity modifier and tackifier used in greases and fluid mineral oils intended for use in food processing equipment. **V-425** also controls misting of lubricants. This clear and colorless additive is more stable at high temperatures than those derived from polyisobutylene.

**FUNCTIONAL V-460** has excellent shear stability that makes it ideal for use in preparing industrial fluids and lubricants.

**FUNCTIONAL V-508F** is used in vegetable- or animal-based fatty oils and esters to blend lubricants of ISO 46 or ISO 68 viscosity grade. **FUNCTIONAL V-508F** is LuSC listed for EU Ecolabel formulations and suitable for use in Vessel General Permit (VGP) applications.
